

SSI Leasing boxcars started appearing during the boxcar boom of the 1970's. These cars were built by FMC and were delivered to the SSI lease railroads in the mid 70's. Many cars share the common SSI color scheme and lettering. Most cars of this era were initially built to Plate B clearances and had end of car cushioning. This set provides you the necessary artwork for lettering the early SSI leasing cars which can still be seen in the new millennium.
