

This set will cover a variety of SHerzog and RailGon Gondolas. In this set you might notice the yellow rectangles. Those are for laying down the large TTX logo on a rib sided car. The NSC car has odd shaped ribs that might make decal handing difficult. A modeler might appreciate either laying down the yellow first then touch up any breaks that occurred during application around the ribs. After satisfied with the appearance of the Yellow field, lay the TTX logo on for the second layer.

USE WITH: MC-5003 COTS or MC-5004 panels (Lube Plates)
MC-4280 ACI Plates
