

Hints and Tips for Using MICROSCALE Alphabet and Number Decals

MICROSCALE Decal
HO Scale 90000-series
N Scale 70000-series
O Scale 50000-series
G Scale 30000-series
Alphabets and Numbers

Cut individual letters or numbers by cutting vertically midway between letters. After soaking each letter in water, slide each letter into place using a small, soft paint brush moistened with either water or Micro Set. The next decal is then pushed into place with the clear film adjoining the previously applied decal edge.

Decal properly cut, aligned and positioned showing film edges...

An inexpensive set of dividers or calipers can be used as an aid in getting each letter lined up accurately.

There may be some variation, but generally the lettering on these decals are available in the following *scale* sizes:

16"	A	7
12"	A	7
8"	A	7
6"	A	7
4"	A	7

For more information on the Microscale line of model railroad decals, visit us on-line at: <http://www.microscale.com>

The final digit in the stock number indicates the alphabet's color. If the stock number ends in:

- 1 then the color is WHITE
- 2 then the color is BLACK
- 3 then the color is GOLD
- 4 then the color is SILVER
- 5 then the color is RED
- 6 then the color is YELLOW
- 7 then the color is BLUE
- 8 then the color is DULUX
- 9 then the color is GREEN

For example, if you have decal 90105, which is RED, but you also want it in DULUX, then order set 90108.

NEGLECT

To create lettering that appears worn, simply rub the decal on the paper (before cutting) with a soft, pink eraser. Once the desired amount of wear has been achieved, overcoat the decals with Microscale Liquid Decal Film (#MI-12). This can be applied with a paint brush, as any brush marks will flatten out as it dries. Once dry, simply cut out the decals and apply as you would any other Microscale decal. A bit of experimentation may be necessary, but the results can be striking!
